EDUCATION

Yeshwantrao Chavan College Of Engineering

B-Tech in Information Technology — CGPA:8.6

Nagpur, Maharashtra

Aug. 2023 - Present

Shri Rajendra Junior College

Higher Secondary Certificate — 81%

Nagpur, Maharashtra

2023

Shri Rajendra Highschool

Secondary School Certificate — 95%

Nagpur, Maharashtra

2021

EXPERIENCE

AI Intern – Edunet Foundation

IBM AI Program

June 2025 – July 2025

Virtual Internship

- Worked on Artificial Intelligence and Machine Learning concepts
- Built mini-projects using Python, Machine Learning Data Analysis
- Learned real-world applications of AI in business use-cases

Intern – Data Science

Codec Technologies

June 2025 – July 2025

Virtual Internship

- Worked on Data Science concepts including data preprocessing, exploratory data analysis (EDA)
- Gained hands-on experience in Python libraries such as Pandas and NumPy for data manipulation

TECHNICAL SKILLS

Languages: Java, Python, SQL

Frameworks: Streamlit, Scikit-learn, LangChain,

Developer Tools: Git, Github, VS Code, Google Colab, Jupyter Notebook, Maven

Libraries: Pandas, NumPy, Matplotlib, Librosa, XGBoost

ML/AI: Supervised Learning, Ensemble Methods, Feature Engineering, Data Augmentation, AutoEncoders

Generative AI: LLMs, Prompt Engineering, HuggingFace Transformers, RAG (Retrieval-Augmented Generation)

PROJECTS

Deep Packet Inspection System | Java, Pcap4J, Networking

July 2026

- Built a real-time packet inspection engine using Java and Pcap4J to capture and analyze live network traffic.
- Parsed Ethernet, IPv4, TCP, UDP, HTTP, and DNS packets for protocol analysis and flow monitoring.
- Implemented traffic statistics, protocol classification, top talker identification, and port scan detection.
- Generated interactive HTML dashboards with protocol distribution, packet counts, and network insights.
- Exported detailed CSV and PDF reports summarizing packets, flows, bandwidth usage, and security events.

Voice-Based Stress Detection using ML | Python, ML, Librosa, Scikit-Learn

Apr 2026

- Designed and developed MindVibe, a voice-based stress detection system using Machine Learning.
- Collected and merged multilingual speech datasets with a custom dataset of over 5,000 audio recordings.
- Engineered audio features using Librosa and trained multiple ML models including Random Forest, SVM, and XGBoost.
- Built an interactive Streamlit application for real-time voice analysis and stress prediction.
- Achieved up to 97.42% accuracy using a Stacking Ensemble with 5-fold cross-validation.

CERTIFICATES

- Artificial Intelligence Fundamentals Certificate by IBM Skillbuild
- Generative AI mastermind Certificate by Outskill
